Consensus Exercise:  
Surgical Management of Fistulating Perianal Crohn’s Disease 

Friday 18th March 2016 10am – 5pm 
Webb Johnson Hall, Royal College of Surgeons, London 

The ACPGBI Delphi group addressing the question on ‘optimisation of the management of fistulating perianal Crohn’s disease’ invite you to participate in a consensus exercise to establish current surgical practice and help shape the intervention bundle for a future collaborative trial in fistulating perianal Crohn’s disease. 

We are grateful to the many ACPGBI members who have contributed to our recent survey, run through the trainee collaborative networks. From this, we have developed management algorithms and demonstrated variation in practice. 

The next phase is to explore and, if possible, resolve management issues through a consensus exercise. The exercise will take place over a single day and the subsequent publication published under collaborative authorship. 

Participants should be practising Consultants working in Great Britain and Ireland, and should have completed one of the survey questionnaires before attending (available from m.j.lee@sheffield.ac.uk). 

Full agenda and further information will be provided a fortnight before the meeting. Refreshments will be provided throughout the day but participants are expected to finance their own travel expenses. 

If you would like to attend or need further information, please contact us to register. We look forward to seeing you then and to a stimulating meeting.
